Braithwaite, D. G.
PREPARATION OF ORGANOMETALLIC COMPOUNDS.
[1961] 11p.
Order from LC or PLA rn$7.40, ph$5.30 61-10085

Trans. of Belgian patent 590,453 by Nalco Chemical Co., filed 4 May 60 (priority U. S. 5 May 59).

A new and improved process for the manufacture of tetraethyllead is described. Organometallic compounds can be produced by electrolysis of a pure anhydrous solution of a Grignard reagent in an ether solvent for the latter, using a sacrificial anode and adding to the electrolyte an organic halide whose organic radical corresponds to that of the Grignard reagent used. The term "organic halide" here includes the organic chlorides, bromides and iodides. The halogen radical of the added organic halide should not be the same as the halogen radical of the Grignard reagent. The free hydrocarbon radicals derived from the Grignard reagent during the electrolysis combined (Chemistry--Organic, TT. v. 5, no. 12) (over:)
